

5 Little Known Ways Identity Theft Affects You

Medical

You could be treated – & misdiagnosed – if a thief's info is in your records.

Synthetic

A person creates a new bogus identity using info from numerous victims. This makes it difficult to figure out how many victims are involved.

Child

Criminals can use a child's identity for years putting a child's future credit rating & ability to get student loans at risk.

Mining Social Media Profiles

People who don't have privacy settings on their social media profiles are prime targets.

Fake Wi-Fi

A thief sets up a Wi-Fi network with the same name as the real one & you mistakenly log on. Using malware, the perp hacks your email & bank accounts.
